what is Accoya® wood?

Accoya® wood is produced from sustainably sourced, fast growing softwood using a non-toxic modification process from the surface to the core.

The result: a durable, dimensionally stable and beautiful material with the performance characteristics of the most durable tropical hardwoods, but offering industry-leading environmental credentials.

A new world of cladding possibilities is available using Accoya® wood:

- Use of wider cladding boards is allowed by the improved dimensional stability
- Cladding joints do not open, tolerances remain tight and twist is prevented
- Decreased overall life cycle cost thanks to the improved coating life and timber durability
- The wood's natural appearance is retained for longer, thanks to the superior resistance to the effects of UV exposure
- A more flexible design is made possible for architects and specifiers

cladding boards
125 - 175mm wide

Sivalbp the company

This ultra modern production facility based in the South of France combines the latest technology in wood processing, with high quality pre-coating preparation and sophisticated environmentally friendly coating methods to produce a range of coated products that are both high performance and aesthetically pleasing.

Clavea profile

- Profile dimension 21 thickness, and 125 or 175mm effective width (face cover)
- 300 g/m² of high quality paint, two layers on the face of acrylic water based paint
- 10 year warranty on the coating
- Environmentally friendly finish process "LABEL VERT" with water recycling process
- 10 colours available
- T&G on the four sides
- 1 layer of paint applied on the back side
- Significantly reduced on-site trim wastage achieved by board end matching which permits board joints to occur off centre from battens
