

Certified timber cladding options

Vincent Timber was one of the first companies in the UK to achieve Chain of Custody for Canadian and American timbers from CSA and SFI certified forests under BM TRADA's Chain of Custody Certification. This makes Vincent

Timber one of the leading suppliers of Certified Western Red Cedar.

In addition to the above, Vincent Timber has now achieved Chain of Custody Certification for FSC and PEFC certified timbers. The use of external timber cladding on buildings, particularly in the public sector, is very much in fashion. The versatility, durability and aesthetic appeal of natural wood as a construction material has never been stronger.

Timber Cladding can be treated with an exterior fire retardant if required; and either left undecorated to weather to a low maintenance driftwood silvery-grey patina, or stained or coated as the designer requires.

Sweet Chestnut hardwood cladding from Vincent Timber, a partner in the Kingspan Alliance, was used extensively on BRE's carbon zero house at the Innovations Park in Garston.

Fire retardant

The Alan Higgins Centre in Coventry is the latest in a portfolio of prestigious projects to benefit from the exceptional performance and aesthetic properties of Siberian Larch which was treated with Non-Com Exterior fire retardant.

FSC hardwood cladding

Vincent Timber's newest addition to its existing wide range of FSC certified hardwood cladding products is FSC certified Red Louro. It is increasingly being specified as a natural hardwood timber cladding material and is achieving growing popularity within the construction industry. The density, life expectancy and durability of Red Louro is similar to that of Oak and the product's pale, warm red/brown colour gives a highly desirable look which, over time, will weather to a pale silvery grey (unless treated/coated.)

Shingles - Green by Design

Vincent Timber's Certified Western Red Cedar shingles are renowned for their natural durability, insulation qualities and dimensional stability. Western Red Cedar contains a natural preservative which makes the wood very durable in its natural state. Its unique cellular composition makes a roof or wall of shingles a natural barrier to heat and cold, providing a high degree of thermal insulation. Full technical support available together with nationwide delivery.

Award Winning Cape Cod

Designers and building owners wishing to replicate the look of authentic "New England" style timber cladding are achieving dramatic results with Cape Cod - its proven versatility and wide range of colours will add exceptional aesthetic charm to any building. Long life weathering properties and a tough durable surface, making the product capable of coping with the harshest treatment and busiest environments for decades - deliver a tried and trusted winner. Cape Cod real wood cladding carries a 15 year extendable performance warranty. Dedicated bargeboards and fascias are also available in black and white.

Cedar in Demand

Vincent Timber's Western Red Cedar cladding combines visual harmony with stability and durability. Its dimensional stability makes it perfectly suited to a variety of uses and it is probably one of the best known exterior cladding options available.

It is a wood of exceptional beauty and durability. In its natural unfinished state Western Red Cedar has a richly textured, tactile grain and warm mellow tone which weather over time to a driftwood silvery grey. Its appearance is constantly changing with the effects of sunlight and seasonal conditions. No man-made material can compare with the depth of cedar's natural lustre.
